

La'Mon Bliss

Technical Consultant Infrastructure Engineer Solutions Architect

Fort Collins, CO
lamonbliss@gmail.com

Core Competencies

- **Virtualization & Cloud:** VMware (ESXi, vRealize Network Insight, vCenter, NSX), Hyper-V, Google Cloud Platform, Docker
- **System & Network Administration:** Windows/Linux Administration, Active Directory, PACS, SQL Server, F5 Load Balancing
- **Technical Tools & Languages:** Python, JavaScript/Node.js, SQL, Bash/Shell, PHP, C++, C#, REST APIs, CI/CD
- **Technical Documentation & Training:** Creating runbooks, knowledge articles, and facilitating team training
- **Customer Service:** Enterprise client consulting, remote troubleshooting, stakeholder relations

Education

Full Sail University —
Bachelor of Science, Computer Science
Focus: Artificial Intelligence
(In Progress)

Front Range Community College, Fort Collins —
Associate's Degree in Computer Science
(2015-2019)

Colorado Early Colleges, Fort Collins — Endorsed High School Diploma
(2015-2019)

Professional Experience

Unlimited Bliss, LLC — Founder & Lead Engineer

2019 - Present

- Architect and operate **production SaaS infrastructure** on GCP: manage Linux-based backend services including Node.js APIs, OAuth gateway, Nginx reverse proxy, and SSL automation.
- Deployed containerized microservices using **Docker and Google Cloud Run** with auto-scaling capabilities; implemented load balancers with multi-region redundancy for 99.9% uptime.
- Built custom **monitoring and alerting system** with email/SMS notifications for application health, API availability, and service uptime tracking.
- Develop workflow automation using n8n and custom scripts for data processing, user provisioning, and cross-system integrations with rate-limited queue processing.
- Deliver full-stack application with 18,500+ lines codebase, 15+ REST API endpoints, OAuth 2.0 authentication, and Stripe billing integration.

Philips — Technical Consultant

June 2023 - January 2026

- Served as **technical consultant** for enterprise healthcare clients, providing guidance on deployment strategies, automation, and operational optimization across multi-site environments supporting 5,000+ users.
- Maintained **99.9% uptime** for production systems through proactive monitoring, incident response, and infrastructure management on VMware and Hyper-V platforms.
- Managed deployment automation scripts and SQL-based data migration packages; implemented formal **change management procedures** including impact assessment, rollback planning, and stakeholder approval workflows.
- Built custom **log analysis automation** reducing mean time to identify (MTTI) for root cause analysis; configured alerting systems with severity-level thresholds for proactive monitoring.
- Troubleshoot complex production issues including database performance, authentication failures, and system integration problems within tight maintenance windows.

VMware — Technical Support Engineer II (SME)

(Host Management, VM Management, Networking, vRealize Network Insight)

June 2020 - April 2023

- Delivered expert-level support for enterprise customers across VMware's virtualization ecosystem, including ESXi host management, VM lifecycle, virtual networking, and vRealize Network Insight.
- Resolved **600+ P1/P2 production incidents** annually; performed root cause analysis, collaborated with engineering teams, and delivered solutions minimizing downtime.
- Developed custom **automation scripts in Python and JavaScript** to track host uptime, API health metrics, and system diagnostics; reduced manual toil and improved incident detection.
- Authored technical documentation including troubleshooting runbooks and knowledge base articles; provided solution guidance to customer management on infrastructure optimization.

Awards & Recognition

- **CBS4 News** Chosen Future Leader of Colorado
- **Colorado Early Colleges** 2018 Scholarship Award
- **Lifetime Member** — National Society of Leadership and Success

Portfolio: laMonbliss.github.io

Intel — Software Engineering Intern

December 2020 - July 2022

- Developed automated test programs utilizing **Python, PyWinAuto, and C#** for semiconductor validation within Intel's TPIE and TORCH platforms, increasing test coverage efficiency by 15%.
- Collaborated directly with cross-functional teams of 8-12 test engineers to optimize test flows, reducing equipment downtime by 20% through proactive issue identification and code enhancement.
- Managed internal technical escalations across multiple engineering groups, contributing to a 25% reduction in turnaround time for issue resolution and improving test system reliability.

Colorado Early Colleges — IT Apprentice

July 2016 - June 2020

- Provided end-user technical support to faculty, staff, and students, resolving issues across hardware, software, and network environments.
- Administered **Active Directory and Windows Server** infrastructure, managing user accounts, security policies, and server maintenance, ensuring 99% infrastructure uptime.
- Conducted hardware repairs, managed a campus-wide printing infrastructure of over 50 devices, custom-built over 100 desktop systems, and provided AV technical support for 30+ events annually.
